-!- FUNCTION: MICROTUBULE-ASSOCIATED FORCE-PRODUCING PROTEIN INVOLVED
IN PRODUCING MICROTUBULE BUNDLES AND ABLE TO BIND AND HYDROLYZE
GTP. MOST PROBABLY INVOLVED IN VESICULAR TRAFFICKING PROCESSES, IN
PARTICULAR ENDOCYTOSIS.

chromosomes 2 and 9, respectively.";

Genomics 41:290-292(1997).

-! FUNCTION: MICROTUBULE ASSOCIATED FORCE-PRODUCING PROTEIN INVOLVED IN PRODUCING MICROTUBULE BUNDLES AND ABLE TO BIND AND HYDROLYZE GTP. MOST PROBABLY INVOLVED IN VESICULAR TRAFFICKING PROCESSES, IN PARTICULAR ENDOCYTOSIS.

-! CATALYTIC ACTIVITY: GTP + H(2)0 = GDP + phosphate.

-! SIMPLEAULAR LOCATION: MICROTUBULE-ASSOCIATED.

-! SIMILARITY: BELONGS TO THE DYNAMIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PROSITE; PS00410; DYNAMIN; 1.

THE ADDITIONAL TAUGHT OF THE STANDARD MAINTENANCE OF NEURONAL POLARITY IN DESTRUCTION OF WIGH STANDARD MAINTENANCE OF NEURONAL POLARITY. THE C-TERMINUS BINDS AXONAL MINTENANCE OF NEURONAL BE INVOLVED IN THE ESTABLISHENTA AND MAINTENANCE OF NEURONAL POLARITY. THE C-TERMINUS BINDS AXONAL MICROTUBULES WHILE THE N-TERMINUS BINDS NEURAL PLASMA MEMBRANE COMPONENTS, SUGGESTING THAT TAU FUNCTIONS AS A LINKER PROTEIN BETWEEN BOTH. AXONAL POLARITY IS PREDETERMINED BY TAU LOCALIZATION (IN THE NEURONAL CELL) IN THE SHORT TAU FUNCTIONS ALLOW PLASTICITY OF THE CYTOSKELETON WHEREAS THE LONGER ISOFORMS MAY PREPERENTALLY PLAY A ROLE IN 1TS STABLILIZATION.

1. SUBCELLULAR LOCATION: MOSTLY FOUND IN THE AXONS OF NEURONS; IN THE CYTOSOL AND IN ASSOCIATION WITH PLASMA MEMBRANE COMPONENTS.

2. SUBCELLULAR LOCATION: MOSTLY FOUND IN THE EXCUSE OR ASSENCE CYTOSOL AND IN ASSOCIATION WITH PLASMA MEMBRANE COMPONENTS.

2. ALTERNATIVE PRODUCTS: AT LEAST 6 ISOFORMS; PNS-TAU (SHOWN HERE), TAU-A, TAU-B, TAU-B, TAU-C, TAU-D AND TAU-E; ARE PRODUCED BY ALTERNATIVE SPLICING THE EXONS. ONE OF THESE OPTIONAL EXONS CONTAINS THE ADDITIONAL TAU/MAP REPEAT. TWO DIFFERENT C-TERMINI ARE OF THE LIVER AND KIDNER, EXPRESSED IN THE PERRIPHERAL NERROL SYSPERMENT C-TERMINI ARE OF THE LIVER AND KIDNEY. PNS-TAU IS EXPRESSED IN THE PERRIPHERAL NEARLY NEARLY NEARLY SYSPEM WHILE THE OTHERS ARE EXPRESSED IN THE CENTRAL NEARLY NEARLY NEARLY NEARLY NEARLY NEARLY NEARLY SYSPEM WHILE THE OTHERS ARE EXPRESSED IN THE CENTRAL NEARLY                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- DOMAIN: THE TAU/MAP REPEAT BINDS TO TUBULIN. TYPE I ISOFORMS
CONTAIN 3 REPEATS.
-!- PTM: PHOSPHORYLATION AT VARIOUS SERINE AND THREONINE RESIDES IN
S-P OR T-P MOTIES BY PROLITED PROTEIN KINASES (PDPK: CDC2,
CDK5, GSK3, MAPK) (A FEW SITES PER PROTEIN IN INTERPHASE, MORE IN
MITOSIS, AND AT SERINE RESIDES IN K-X-G-S MOTIES BY
MAPPAICROTHOBULE AFFINITY RESULATING KINASE (MARK) (BY SIMILARITY).
-!- DISEASE: MAY BE INVOLVED IN THE PATHOGENESIS OF CYTOPIASMIC
INCLUGIONS (AS MALLORY BODIES) IN LIVERS OF MICE CHRONICALLY
INTOXICATED WITH GRISCOFULVIN OR DDC (3,5-DIETHOXYCARBONYL-2,4-
DIHYDROCOLLIDINE), A MODEL FOR HUMAN ALCOHOLIC HERPATITIS.
ALTERATION OF TAU (ABNORMAL PHOSPHORYLATION AND CROSSLINKING)
COULD CONTRIBUTE TO MALLORY BODIES FORMATION AND DISTURBANCE OF
MICROTUBULE FUNCTION IN ALCOHOLIC LIVER DISEASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DEVELOPMENTAL STAGE: SHORTER FORMS OR LOW MOLECULAR WEIGHT TAU (LAW-TAU) ARE GENERALLY EXPRESSED AT EARLY DEVELOPMENT STAGES AND LONGER FORMS OR HIGH MOLECULAR WEIGHT TAU (HMW-TAU) IN THE ADULT

"Molecular characterization of the family of the N-methyl-D-aspartate receptor subunits.";
J. Biol. Chem. 268:236-2843(1993).
-!- FUNCTION: NWIDA RECEPTOR SUBTYPE OF GLUTAMATE-GATED ION CHANNELS POSSESSES HIGH CALCIUM PERMEABILITY AND VOLTAGE-DEPENDENT SENSITYUTY TO MAGNESIUM AND IS MODULATED BY GLYCINE.
-!- SUBUNIT: HETERODIMER OF AN PESILON SUBUNIT AND A ZETA SUBUNIT.
-!- SUBGELLOLAR LOCATION: Integral membrane protein.
-!- SIBCELDLAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Postsynaptic membrane; Ionic channel; Glycoprotein; Signal;

A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, Tb37-FL The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins presents. ESAT-6, are useful in vaccines, preferably when formulated with a non-specific adjuvant, to induce an immune response against

The state of the s

```
A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, TB37-FL. The Immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibodies in the sample. Fragments of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are also used for diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA1998.DAT:AAW81705

This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of tuberculosis.

```
This polypeptide comprises Mycobacterium tuberculosis antigen Tb37-FL. It is encoded by genomic DNA isolated from a M. tuberculosis strain H37Rv genomic library using a probe from clone Tb38-I (see AAVA484). The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAWA429) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or oligonucleotide probes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     - used

The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's, DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAX19249 to AAX19460 and AAX3083 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes novel recombinant antigens and their encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                      seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-embl/AA1999.DAT:AAY38992

```

(first entry)

```
The present sequence is that of the Mycobacterium tuberculosis
MTBN3 protein. This is 1 of 8 proteins, 1.e. MTBN1-8 (see
AAB19842-49), encoded by 8 open reading frames (see AAA89035-42)
identified as being present in the genome of M. tuberculosis but
absent from the genome of the BCG strain of Mycobacterium bovis.
MTBN1-8 represent reagents that are useful in discriminating between
M. tuberculosis and BCG and, in particular, for diagnostic methods
which discriminate between exposure of a subject to M. tuberculosis
and vaccination with BCG. The invention features these MTBN
cotypeptides, functional fragments of them, DNA encoding them,
cvectors, transformed cells, and diagnostic, therapeutic, and
methods.
                                                                                                                                                                                                                                                                                                                                                                                                                  Novel polypeptide encoded by open reading frames present in Mycobacterium tuberculosis genome and not by the BCG strain of M. bovis, useful as vaccine and for diagnosing tuberculosis infection
                                                                                                                                                                                                                                                                                                           (PUBL-) PUBLIC HEALTH RES INST NEW YORK

Products from the present invention, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosis of or vaccination against tuberculosis caused by M. tuberculosis, M. africanum or M. bovis.
                                                                                                                                                                                                                            for

The invention describes a substantially pure immunogenic polypeptide fragment (I) from Mycobacterium tuberculosis that is able to evoke a protective immune response against infections by mycobacteria belonging to the tuberculosis complex. The invention provides a (1) fusion controlled fragment comprising at least one polypeptide fragment (I) and at least one fusion partner; (2) a fusion polypeptide fragment comprising a T-cell epitope from M. tuberculosis protein ESAT-6, or MPT59 and a second different amino acid sequence from M. tuberculosis, and/or including a sequence which protects the first amino acid sequence from in vivo degradation or post-translational processing; (3) a nucleic acid fragment that encodes the above polypeptides. The polypeptides and nucleic acid are useful as pharmaceuticals, for diagnosis of and as antiganes for a real sequence bovis. The polypeptides are also useful for diagnosing or previous sensitization in an animal with bacteria belonging to the tuberculosis complex. The invention also describes the use of CPP7A or CPP30A, or T-cell epitope of for the induction of a strong immune epitope of for diagnosis of TB in a mammal by performing a DTH type skin test; use of CPP27, CPP93A, CPP19, CPP919, or MPT59-ESAT6 or a T-cell epitope of for the preparation of an immunological composition; and cell epitope of for the preparation of an immunological composition; and cell epitope of for the preparation of an immunological composition; and

  The present sequence represents a Mycobacterium tuberculosis protein. Products from the present invention, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosis of or vaccination against tuberculosis caused by M. tuberculosis, M. africanum or M. bovis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunogenic; Mycobacterium tuberculosis; immune response; infection; tuberculosis; fusion polypeptide; T-cell epitope; ESAT-6; MPF99; TB; pharmaceutical; vaccination; M. africanum; M. bovis; CFP7A; CFP30A; CFP7B; CFP19;                                                                                                         New isolated mycobacteria polypeptides and nucleic acids - used for developing products for the diagnosis of or vaccination against mycobacterial infections, particularly tuberculosis

```
The invention describes a substantially pure immunogenic polypeptide fragment (I) from Mycobacterium tuberculosis that is able to evoke a protective immune response against infections by mycobacteria belonging to the tuberculosis complex. The invention provides a (1) fusion confits of the tuberculosis complex. The invention provides a (1) fusion pattner; (2) a fusion polypeptide fragment (I) and at least confitsion pattner; (2) a fusion polypeptide fragment (I) and at least confitsion pattner; (2) a fusion polypeptide fragment (I) and a second different amino acid sequence from M. tuberculosis, and/or including a sequence which protects the first amino acid sequence from in vivo degradation or post-translational processing; (3) a nucleic acid fragment that encodes the above polypeptides. The polypeptides and nucleic acid fragment conscination against TB caused by Mycobacterium tuberculosis, africanum or vaccination against TB caused by Mycobacterium tuberculosis, africanum or crowdist. The polypeptides are also useful for diagnosing ongoing or previous sensitization in an animal with bacteria belonging to the cuberculosis complex. The invention also describes the use of CPP7A or CPP30A or T-cell epitope of for the induction of a strong immune complexed in a mammal; use of CPP7B, CFP19, RD1-ORF5, RD1-ORF5, MPT59-ESAT6, CELL epitope of for the preparation of a strong immune cell epitope of for the preparation of a strong immune cell epitope of for the preparation of an immunological composition; and for the preparation of an immunological composition; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            153 GCCGCGCCCGCGCTGGGGCCTGATCCACCAGCGGATGGTTCGACA 104
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17 gProAlaProAlaLeuGlyProAspProProAlaSerGlyTrpPheAspS 34

Ab05389-AAD05473 represent cDNAs corresponding to 29 human secreted protein genes, and AAE01546-AAE01630 represent the proteins they encode. AAE016131-AAE01660 represent human secreted protein fragments or variants. The secreted proteins and their genes are useful for preventing, therapy. Pathological conditions can be diagnosed by determining the company. Pathological conditions can be diagnosed by determining the presence of mutations in the new genes. Specific uses are described for each of the 29 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental aborders, haematopoietic disorders, diseases of the immune system, ALDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders, schizophrenia, asthma,
                                                                                                                                                                                               Human; secreted protein; proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; AIDS; autolmmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; ParkInson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; endocrine disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; chromosome 17; binding partner identification; gene therapy.

skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunoscorbent assay (ELISA). The present sequence represents a human certed protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA2000.DAT:AAB54248

```
AAC98773 to AAC99231 encode the human pancreatic cancer associated proteins, called pancreatic cancer antigens, given in AAB54008 to AAB5466. The human pancreatic cancer antigens have cytostatic, cancer antigens have cytostatic, cancer partices have cytostatic, cancer antigens have cytostatic, cancer antigens have cytostatic, cancer antigens have cytostatic, cancer therapy. The polynucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the proteins can be identified. The pancreatic cancer antigens can be used to detect, treat or prevent pancreatic disorders, especially cancer. Cacterial and antagonists to the antigens can be screened for. The pancreatic cancer antigen polynucleotides can be used to design nucleic acid hybridisation probes that can be used in chromosome mapping, linkage and alagnostic methods. The proteins can be used to densic and diagnostic methods. The proteins can be used to pencrate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and target the polypeptides, including the productive, gastrointestinal, pulmonary, cardiovascular, renal or reproductive disorders. AAS99221 or AAC99240 and AAB54467 represent
                                                                                                                                                                                                                                                                                                                              detection; diagnosis; identification; oytostatic; neuroprotective; nootropic; immunomodulatory; relaxant; contraceptive; gynaecological; antiinflammatory; aardiant; gene therapy; chromosome mapping; linkage analysis; tissue identification; tissue typing; forensic; neural; immune system; muscular; reproductive; gastrointestinal; pulmonary; cardiovascular; renal; proliferative.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                       164
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

```
The present sequence represents a human Wiskott-Aldrich syndrome protein (WASP)-interacting protein (WIP). WIP or DNA encoding WIP can be administered to an individual, in sufficient quantity to alter actin content and/or the extent to which polymerisation occurs, and thus, to prevent or reduce (totally or partially) cytoskeletal abnormalities and other adverse effects. In particular, Wiskott-Aldrich syndrome can be treated or prevented in this manner.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, Wiskott-Aldrich syndrome; Wiskott-Aldrich syndrome protein;
